Google Advanced Operators

- Normal searching is easy, just Google for the word or words
 - To go deeper we need the advanced operators
 - Remember that some of these work best in certain sections only
 - Remember that some cannot be used in conjunction with others
 - A useful list is
 - site – search in domain
 - inurl – search URL
 - intext – search page text
 - intitle – search page title
 - filetype – search for file
 - example search – *inurl:security intext:linux site:co.za*
 - Many, many more - http://www.googleguide.com/advanced_operators.html
 - Now on to the fun stuff...
-

What can I do?

- GDDS – Google Dork Dection System
- Snort – Custom Rules
- Google Hack HoneyPot - <http://ghh.sourceforge.net/>
- Website Configuration
- Network Configuration
- Against cached searches though, nothing
- Why Erich? Why?
